Quiz Human Respiratory System - CliffsNotes

Almost all living things (except some bacteria) need oxygen to live. The lungs are the organs involved with breathing. They are the main organs that make up the respiratory system. The function of the respiratory system is to take oxygen into the lungs and to get rid of water and carbon dioxide.

Human Respiratory System Worksheet | Human body systems ...

Respiratory System Parts. In humans and most mammals, the anatomy of the respiratory system is divided into three parts. The first is the series of conducting tubes that carry air from the atmosphere towards the lungs. The second part consists of the muscles of respiration - the diaphragm and intercostal muscles in the ribs. The lungs form ...

Human Respiratory System - cliffsnotes.com

The Human Respiratory System. For instance, the lower organisms like the unicellular take up oxygen and release carbon dioxide by the process of diffusion across their membrane. Annelids like earthworms have a moist cuticle which helps them in gaseous exchange. Respiration in fish and other aquatic organisms have special organs called gills,...

Respiratory System - Definition, Function and Parts ...

The heart and pulmonary system The heart is located roughly in the center of the chest cavity. It is covered by a protective membrane, the pericardium. Deoxygenated blood from the body enters the right atrium. It flows through the tricuspid valve into the right ventricle. The term tricuspid refers to the three flaps of tissue that make up the valve.
