One of the reasons that the Fife is a popular variety of canary is that there are lots of different colours to choose from. For example: Yellow - intense yellow shade. Buff - yellow with frosted edging to the feathers, lighter in colour. White - either all-white (recessive) or with some tiny yellow feathers (dominant)

### **Show Standards and Rules - Colour Canaries**

Genetically speaking, a canary's color is derived from two basic elements: lipochrome color and melanin color. The lipochrome color is the ground color, which is yellow in the wild canary and also includes dominant white, recessive white and red. The melanin color includes the dark hues of black and brown of the wild canary.

The color of "MELANINS" (dark) canaries is the product of superposition of two types of pigmentation: ground pigment (i.e. red, yellow or white), and melanin pigments (i.e. black and/or brown). Lipochrome (clear) canaries are unable to produce melanin pigments and, therefore, only the ground pigment (red, yellow or white) shows.
