Flow Around Circular Cylinders Applications

A wind tunnel study has been carried out to investigate flow control around a hollow circular cylinder using passive jets driven by naturally occurring pressure differences. Flow enters the cylinder through spanwise holes along the stagnation line and exits through a spanwise distribution of holes at $\pm 65^\circ$.

Numerical study of flow through and around a circular ...

This book is a unique compilation of experimental data, theoretical models, and computer simulations of flow past circular cylinders. The circular cylinder is the most widely used shape in engineering, making appearances in aeronautical, chemical, civil, electrical, mechanical, nuclear, off-shore, and wind engineering. The book will be useful to postgraduates and practicing engineers in those ...

Flow Around Circular Cylinders—Volume 1: Fundamentals ...

This paper describes a study of the local and global effect of an isolated group of cylinders on an incident uniform flow. Using high resolution two-dimensional computations, we analysed the flow through and around a localised circular array of cylinders, where the ratio of array diameter (D_G) to cylinder diameter (D) is 21. The number of cylinders varied from $N_C = 7$ to 133, and they were ...
