Learn how to use Punnett squares to calculate probabilities of different phenotypes. Includes worked examples of dihybrid crosses. independent assortment, incomplete dominance, codominance, and multiple alleles.

### **Incomplete Dominance in Genetics - ThoughtCo**

A Punnett Square that is used to cross 2 different traits, contains 16 square. Incomplete Dominance The situation in which the phenotype of heterozygotes is intermediate between the phenotypes of individuals homozygous for either allele.

Slide 9 is a check for understanding of incomplete dominance, where the resulting Punnett square should look like: Slide 15 verifies the students' understanding of co-dominance. A tan cat cannot be heterozygous since the tan color requires two tan alleles. The ratio of phenotypes is two black: two tabby.

While Punnett squares are a convenient tool to understand Mendelian genetics, they cannot be used in many situations involving complex genetic inheritance. For example, they are not effective in estimating the distribution of genotypes and phenotypes when there is linkage between two genes.

### **Punnett square practice problems (incomplete dominance)**

A Punnett Square shows the genotypes two individuals can produce when crossed. To draw a square, write all possible allele combinations one parent can contribute to its gametes across the top of a box and all possible allele combinations from the other parent down the left side. The allele combinations along the top and sides become labels for rows and columns within the

Incomplete dominance is a form of intermediate inheritance in which one allele for a specific trait is not completely expressed over its paired allele. This results in a third phenotype in which the expressed physical trait is a combination of the phenotypes of both alleles. Unlike complete dominance inheritance, one allele does not dominate or mask the other.

We can still use the Punnett Square to solve problems involving incomplete dominance. The only difference is that instead of using a capital letter for the dominant trait & a lowercase letter for the recessive trait, the letters we use are both going to be capital (because neither trait dominates the other).
