6th Grade Math - Unit 2: Unit Rates and Percent - Lesson 5

I want students to understand that a unit rate is when one part of the rate is compared to a single unit of the other part of the rate. Students should realize that traveling 75 miles per hour is equivalent to traveling 75 miles in one hour. We review the examples and I ask for a student to create their own unit rate.

Video transcript. You have to divide both the numerator and the denominator by the same number. So now we have 63 newspapers for every 1 hour. Or we could write this as 63 over 1 newspapers per hour. Or we could write this as 63, because 63 over 1 is the same thing as 63 newspapers per hour.

Grade 6 Unit Rate Worksheets - Lesson Worksheets

Students worked on unit rate problems in the previous lesson, so there is no new material in this lesson. Rather, I am giving students more practice with using unit rates to find equivalent fractions. The problems in this lesson require students to use decimals and fractions in their work, which is difficult for some of my students.

Identify information that is needed to solve a unit conversion problem. Given one unit rate, determine a unit rate in the other direction. Multiply or divide by the unit rate to solve unit conversion problems. Compare and order measurements given in different units by converting them to the same unit.

Sixth grade Lesson Unit Rate Problems (Part 1 of 3)

Lessons 6 and 7 engage students in using ratio reasoning to solve unit conversion problems. In Lesson 6, students re-engage in 4.MD.1, 4.MD.2, and 5.MD.1 to make sense of units and their relative sizes. They also solve straight forward conversion problems using strategies they've learned so far
