Pick the axis you are calibrating. Input a small value, like 2. Once you press OK, the machine will jog to what it thinks is 2 inches. Measure the amount the machine actually moved and input here. The machine will then automatically calculate the correct steps per unit you saw back in Motor Tuning.

With 5-axis machining, you can produce complex parts with fewer operations and setups – reducing cost and delivery times. NX CAM's 5-axis capabilities allow you to create precisely controlled tool paths to effectively machine complicated geometries.
