If the Z-transform of a signal or the transfer function of a system is defined on the unit circle then the discrete-time Fourier transform (DTFT) of the signal or the frequency response of the system are obtained. Duality in time and in frequency is used otherwise to obtain DTFTs of signals and systems.

On this basis, H1 may be viewed as a time-invariant system with memory. System H2 is causal because the output does not appear before the input. The duration of the output is longer than that of the input. This suggests that H2 must have memory. It is time-invariant. System H3 is noncausal because the output appears before the input.
