this will sum up the endpoints after every 20 solutions, and save the running sum. The final result will have sim2.u as simply a number, and thus sim2.u/100 would be the mean. Example 4: Using the Analysis Tools. In this example we will show how to analyze a EnsembleSolution. First, let's generate a 10 solution Monte Carlo experiment.

The T1 and T2 mapping modules were developed and validated in phantoms at 1.5 T and 3 T with reference standard values calculated from reference pulse sequences using the Nelder-Mead Simplex optimisation method. The proposed modules support current commonly available MRI pulse sequences and both 2- and 3-parameter curve fitting.
